

Signals and Systems Homework 5

Due Time: 23:59 April 20, 2018

1. (15) Suppose $g(t) = x(t)\cos(t)$ and the Fourier transform of the $g(t)$ is

$$G(j\omega) = \begin{cases} 1, & |\omega| \leq 2 \\ 0, & \text{else} \end{cases}$$

- (a) Determine $x(t)$ Draw the frequency domain.
 (b) Specify the Fourier transform $X_1(j\omega)$ of a signal $x_1(t)$,

$$g(t) = x_1(t)\cos\left(\frac{2}{3}t\right)$$

2. (15) Consider a LTI system whose response to the input $x(t) = [e^{-t} + e^{-3t}]u(t)$ is $y(t) = [2e^{-t} - 2e^{-4t}]u(t)$

- (a) Find the frequency response of this system.
 (b) Determine the impulse response of the system.
 (c) Find the differential equation of the system.

3. (10) Consider a causal LTI system with frequency response

$$H(j\omega) = \frac{1}{j\omega + 3}$$

For an input

$$y(t) = [e^{-3t} - e^{-4t}]u(t)$$

determine $x(t)$

4. (20) Ideal low pass filter frequency response is shown. Draw the spectrum of the output signal when input is the following function.

Figure 1: Lowpass Filter

- (a) $f(t) = \frac{\sin(\pi t)}{\pi t}$
 (b)

$$f(t) = \begin{cases} 1, & |t| \leq 1 \\ 0, & |t| > 1 \end{cases}$$

5. (20) The spectrum of input band-limited signals is shown in figure a. The highest angular frequency is w_m and $w_b > w_m$, the cutoff frequency of figure b(HP) is w_b ,

$$H_1(j\omega) = \begin{cases} K_1, & |\omega| > w_b \\ 0, & |\omega| < w_b \end{cases}$$

LP is

$$H_2(j\omega) = \begin{cases} K_2, & |\omega| < w_b \\ 0, & |\omega| > w_b \end{cases}$$

draw the spectrum of $x(t)$ and $y(t)$.

Figure 2: Signal and System

6. (20) The bandpass filter responds to the figure.

Figure 3: Signal and System

The inputs are $f(t) = \frac{\sin(2\pi t)}{2\pi t}$, $s(t) = \cos(1000t)$
 Determine the output signal $y(t)$
